VBScript Introduction/Intermediate

Duration: 3 Days

Overview:

Aspect Training's VBScript Introduction/Intermediate Training course covers the use of VBScript with Vista, Windows Server 2003, Internet Explorer, Client Side Scripting and ASP. The course also covers the many new developments to the latest version of VBScript. This course will share practical examples, hands on tutorials, and quick answers aimed at helping you take your scripting skills to the next level.

The course begins with an introduction to VBScript and explains how it works as a language. It then progresses to explaining how to make use of VBScript within other technologies, and will show advanced examples of VBScript code in action. You'll learn to do a variety of tasks, such as copy and move files, create folders and files, modify the Windows operating system, and more. This course will allow delegates to gain greater insight into how VBScript works so that you can start using it right away to save both time and money.

Prerequisites:

This course is for programmers, client and server side web developers, and system administrators who are interested in learning VBScript or becoming more proficient with it. No previous knowledge is required. Knowledge of another program language and HTML would be useful
